Top 20 Most Variable Pathways Across Subtypes

Subtype

regulation of postsynaptic membrane potential
neurotransmitter secretion
signal release from synapse
modulation of chemical synaptic transmission
regulation of trans−synaptic signaling
synaptic vesicle exocytosis
neurotransmitter transport
complement activation
regulation of chromosome separation
immunoglobulin mediated immune response
B cell mediated immunity
adaptive immune response based on somatic recombination of i
adaptive immune response
lymphocyte mediated immunity
leukocyte mediated immunity
regulation of mononuclear cell proliferation
humoral immune response
regulation of lymphocyte proliferation
defense response to bacterium
regulation of adaptive immune response
